

PaperLess
accounting the PaperLess way™

PaperLess Multiline Recognition

Full Invoice Data Capture Automation
for Sage 50cloud, Sage 200cloud, Sage 200 Standard Online
and Sage 200 Extra Online

Thousands of Sage users are now automating invoice data capture processes also on multi-line invoices with PaperLess Multiline Recognition. With a built-in a powerful OCR intelligence module, PaperLess Multiline Recognition of invoices does much more than simply capturing accounting data from invoices with multiple accounting lines. With self-learning capabilities, PaperLess Multiline Recognition automatically analyses the previous postings made to the supplier that invoice relates to and, based on that, automatically populates the VAT and Nominal Code that corresponds to each accounting line on the invoice.

With this powerful module of invoice data capture for Sage, Sage users no longer have to worry about automation of invoices with several accounting lines. All they need to do is to bring them into PaperLess, run PaperLess Multiline Recognition and all data will be automatically captured from line gross/net amounts, to details, and any other data available on the lines that you want to post into Sage.

But there is more.

No more paying per each invoice processed or per each line on the invoices, like with all other features of PaperLess for Sage, you can process unlimited number of invoices without any additional cost.

- ✔ Automatically Capture all Data from Invoices with PaperLess Multiline Recognition for Sage
- ✔ Automatic VAT Reconciliation of Multiline Invoices
- ✔ Automatic Recognition of Invoice Summary Lines
- ✔ Automatic Identification of Invoice VAT Codes
- ✔ Includes Unlimited Number of Invoices Processed
